PROJECT

Change a life. It's simple.

Sponsor a Pig

Spring Point Project is working with the University of Minnesota's Diabetes Institute for Immunology and Transplantation to develop a widely available, affordable cure for insulin-dependent diabetes. Because many with diabetes lack sufficient insulin-producing islet cells, the cure in development involves producing islets for transplantation—and reverse the disease's effects.

A new, virtually unlimited supply of these cells is now being produced—in pigs! But raising "medical grade" pigs is expensive. They need to be housed in a specialized environment, eat special food, drink purified water, and breathe filtered air. It costs nearly $50 per day, per pig.

We're asking for your help. By sponsoring a pig and helping us defray costs, you could free a person with diabetes from so much of the day-to-day burden and worry.

For more information about Spring Point Project, and the exciting cure in development, see springpointproject.org.

Please detach below and return to: Spring Point Project, 121 South Eighth Street, Suite 825, Minneapolis, MN 55402
